

Universal RTU Transforms Real-Time Data Management

Challenges:

- Getting real-time data effortlessly
- Collecting the information from sensors and actuators to integrate into ERP

Our Solutions

- The Xtrakt™ solution transcends traditional data management by introducing local memory and logic execution.
- This powerhouse hardware not only collects data from sensors and actuators but also processes it locally.

Benefits

- Effective Planning
- Enabling the generation of precise logic controls
- Dinrail mountable design ensures seamless integration into existing setups, maximizing efficiency
- Ensures that no valuable information slips through the cracks
